AMBAU Windservice and PowerWind – a strong team AMBAU Windservice GmbH has once again erected a wind energy unit with and for PowerWind

Bremen: Ninety eight metres, 5 tower segments and a capacity of 2.5 megawatts: the PowerWind 90 wind energy unit was erected by PowerWind GmbH in collaboration with the specialists of AMBAU Windservice GmbH on the site of ArcelorMittal in Bremen.

AMBAU Windservice has already been commissioned with erection and service tasks by PowerWind on several occasions in the past. This time, once again, the construction stages went hand in hand and were implemented successfully. The company will also be relying on the skilled staff of AMBAU in the future.

"We are very satisfied with the collaboration with AMBAU Windservice thus far and will continue to turn to this capable and experienced partner in the future," says Peter Klessascheck, Head of Project Management at PowerWind GmbH.

Olaf Dostalek, Managing Director of AMBAU Windservice GmbH, adds: "We are delighted to have found a strong partner in PowerWind. My team is full of praise for the professional co-operation with PowerWind and we are looking forward to further exciting projects."

AMBAU Windservice GmbH is a subsidiary of AMBAU GmbH, a leading manufacturer in the construction of towers and steel foundations for wind energy plants in the onshore and offshore sectors.

AMBAU Windservice stands for a unique range of services, offshore and onshore. The company covers the fields of construction, corrosion protection, rotor blades and flange processing, as well as service and maintenance.

The focus here is upon optimisation of yields for our customers, achieved via innovative processes and technically skilled personnel.

In addition, it is of no consequence whether the plants concerned are onshore units or 5-megawatt-plus facilities in the offshore sector – the name AMBAU Windservice GmbH stands for quality work at all times.

Well-known manufacturers turn to our personnel for support in service and maintenance work. The AMBAU Windservice sites are located in Bremen, Gräfenhainichen and Schwerin.
